

- Today: You MUST sign in if your name is highlighted. Everyone must click in, if possible.
- GET YOUR CLICKER NOW. Starting next week, no attendance sheet, clickers only.
- There is no Blackboard for this course.
- Stay on top of the MLP! First deadline is SUNDAY. Don't wait till the last minute.
- EXAM 1 is in two weeks, covers up to §3.1 (see the semester schedule of material on the course webpage). You must attend your own lecture on exam day.

## Exercise

Determine the **end behavior** of the following functions (in other words, compute both limits, as  $x \rightarrow \pm\infty$ , for each of the functions):

1.  $f(x) = \frac{x+1}{2x^2-3}$

2.  $g(x) = \frac{4x^3-3x}{2x^3+5x^2+x+2}$

3.  $h(x) = \frac{6x^4-1}{4x^3+3x^2+2x+1}$

## Algebraic and Transcendental Functions

### Example

Determine the end behavior of the following functions.

1.  $f(x) = \frac{4x^3}{2x^3 + \sqrt{9x^6 + 15x^4}}$  (radical signs appear)
2.  $g(x) = \cos x$  (trig)
3.  $h(x) = e^x$  (exponential)

## Exercise

What are the vertical and horizontal asymptotes of

$$f(x) = \frac{x^2}{2x + 1}?$$

## 2.5 Book Problems

9-14, 15-33 (odds), 41-49 (odds), 53-59 (odds), 67

## §2.6 Continuity

Informally, a function  $f$  is “continuous at  $x = a$ ” means for  $x$ -values anywhere close enough to  $a$  the graph can be drawn without lifting a pencil. In other words, no holes, breaks, asymptotes, etc.

### Definition

A function  $f$  is **continuous** at  $a$  means

$$\lim_{x \rightarrow a} f(x) = f(a).$$

If  $f$  is not continuous at  $a$ , then  $a$  is a **point of discontinuity**.

## Continuity Checklist

In order to claim something is continuous, you must verify all three:

1.  $f(a)$  is defined (i.e.,  $a$  is in the domain of  $f$  – no holes, asymptotes).
2.  $\lim_{x \rightarrow a} f(x)$  exists. You must check both sides and make sure they equal the same number.
3.  $\lim_{x \rightarrow a} f(x) = f(a)$  (i.e., the value of  $f$  equals the limit of  $f$  at  $a$ ).

### Question

What is an example of a function that satisfies this condition?

## Example

- Where are the points of discontinuity of the function below?
- Which aspects of the checklist fail?

recall (Continuity Checklist):

1. function is defined
2. the two-sided limit exists
3.  $2. = 1.$

## Continuity Rules

If  $f$  and  $g$  are continuous at  $a$ , then the following functions are also continuous at  $a$ . Assume  $c$  is a constant and  $n > 0$  is an integer.

1.  $f + g$
2.  $f - g$
3.  $cf$
4.  $fg$
5.  $\frac{f}{g}$ , provided  $g(a) \neq 0$
6.  $[f(x)]^n$

From the rules above, we can deduce:

1. Polynomials are continuous for all  $x = a$ .
2. Rational functions are continuous at all  $x = a$  except for the points where the denominator is zero.
3. If  $g$  is continuous at  $a$  and  $f$  is continuous at  $g(a)$ , then the composite function  $f \circ g$  is continuous at  $a$ .

## Continuity on an Interval

Consider the cases where  $f$  is not defined past a certain point.

### Definition

A function  $f$  is **continuous from the left** (or **left-continuous**) at  $a$  means

$$\lim_{x \rightarrow a^-} f(x) = f(a);$$

a function  $f$  is **continuous from the right** (or **right-continuous**) at  $a$  means

$$\lim_{x \rightarrow a^+} f(x) = f(a).$$

## Definition

A function  $f$  is **continuous on an interval**  $I$  means it is continuous at all points of  $I$ .

Notation: Intervals are usually written

$$[a, b], (a, b], [a, b), \text{ or } (a, b).$$

When  $I$  contains its endpoints, “continuity on  $I$ ” means continuous from the right or left at the endpoints.

## Example

Let  $f(x) = \begin{cases} x^3 + 4x + 1 & \text{if } x \leq 0 \\ 2x^3 & \text{if } x > 0. \end{cases}$

1. Use the continuity checklist to show that  $f$  is not continuous at 0.
2. Is  $f$  continuous from the left or right at 0?
3. State the interval(s) of continuity.

## Continuity of Functions with Roots

(assuming  $m$  and  $n$  are positive integers and  $\frac{n}{m}$  is in lowest terms)

- If  $m$  is odd, then  $[f(x)]^{\frac{n}{m}}$  is continuous at all points at which  $f$  is continuous.
- If  $m$  is even, then  $[f(x)]^{\frac{n}{m}}$  is continuous at all points  $a$  at which  $f$  is continuous **and**  $f(a) \geq 0$ .

### Question

Where is  $f(x) = \sqrt[4]{4 - x^2}$  continuous?

## Continuity of Transcendental Functions

**Trig Functions:** The basic trig functions are all continuous at all points **IN THEIR DOMAIN**. Note there are points of discontinuity where the functions are not defined – for example,  $\tan x$  has asymptotes everywhere that  $\cos x = 0$ .

**Exponential Functions:** The exponential functions  $b^x$  and  $e^x$  are continuous on all points of their domains.

**Inverse Functions:** If a continuous function  $f$  has an inverse on an interval  $I$  (meaning if  $x \in I$  then  $f^{-1}(y)$  passes the vertical line test), then its inverse  $f^{-1}$  is continuous on the interval  $J$ , which is defined as all the numbers  $f(x)$ , given  $x$  is in  $I$ .

## Intermediate Value Theorem (IVT)

### Theorem (Intermediate Value Theorem)

Suppose  $f$  is continuous on the interval  $[a, b]$  and  $L$  is a number satisfying

$$f(a) < L < f(b) \quad \text{or} \quad f(b) < L < f(a).$$

Then there is at least one number  $c \in (a, b)$ , i.e.,  $a < c < b$ , satisfying

$$f(c) = L.$$

## Example

Let  $f(x) = -x^5 - 4x^2 + 2\sqrt{x} + 5$ . Use IVT to show that  $f(x) = 0$  has a solution in the interval  $(0, 3)$ .

## Exercise

Which of the following functions is continuous for all real values of  $x$ ?

(A)  $f(x) = \frac{x^2}{2x + 1}$

(B)  $g(x) = \sqrt{3x^2 - 2}$

(C)  $h(x) = \frac{5x}{|x^8 - 1|}$

(D)  $j(x) = \frac{5x}{x^8 + 1}$

## 2.6 Book Problems

9-25 (odds), 35-45 (odds), 59, 61, 63, 83, 85
