

In-Class Quiz 1 (Version B): Vectors and vector-valued functions (§11.1-11.6)

Directions: This quiz is due at the end of lecture.

1. **(3 pts)** A block weighing w pounds rests on a ramp with an incline of 60 degrees. If \mathbf{F} is the gravitational force on the block then use the projection formula to find its normal component.
2. **(1 pt)** If \mathbf{u} and \mathbf{v} form two adjacent sides of a parallelogram, then the area of the parallelogram is:
3. **(3 pts)** Suppose $\mathbf{r}(t) = \langle x_0, y_0, z_0 \rangle + t\langle a, b, c \rangle$ is the equation of the line ℓ passing through the point (x_0, y_0, z_0) and parallel to the vector $\langle a, b, c \rangle$. What is the equation of the projection of ℓ into the yz -plane?
4. **(1 pt)** A vector-valued function $\mathbf{r}(t)$ is continuous at $t = a$ provided that
$$\lim_{t \rightarrow a} \mathbf{r}(t) =$$
5. **(2 pts)** Let $\mathbf{r}(t) = \langle 1, 2t, 3t^2 \rangle$. Compute $\int \mathbf{r}(t) \, dt$.
